Abstract not available for EP0610362
Abstract of corresponding document: **WO9308992**

In order to render more difficult the copying of tickets, a laminated security ticket comprising a carrier sheet of paper material and a face sheet of direct thermal paper is disclosed in which the face sheet is sufficiently transparent to permit the carrier sheet to be seen therethrough. Such an arrangement allows the carrier sheet to be provided with a watermark and/or security pattern and/or machine-readable code which is visible through the face sheet. The face sheet itself may also be provided with a security pattern and/or machine-readable code.
